

## Forest Climate Credits System of Catalonia

**Forestry projects for mitigation and adaptation to climate change (PROMACC)**

**Teresa Cervera Zaragoza  
Centre de la Propietat Forestal**

# FOREST TRANSITION IN CATALUNYA 1940-1970

**and CLIMATE CHANGE...over the last 25 years:**

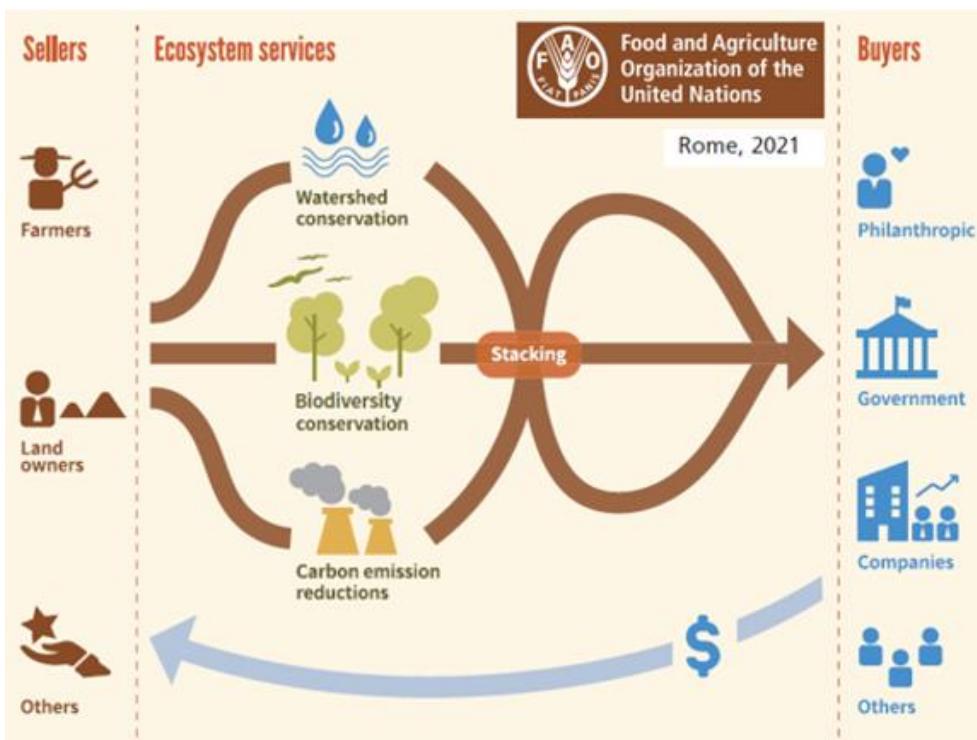

- the rate of CO<sub>2</sub> sequestration has decreased by 17%
- water flows in rivers has decreased by 30 %
- biodiversity linked to open areas has been affected by forest expansion

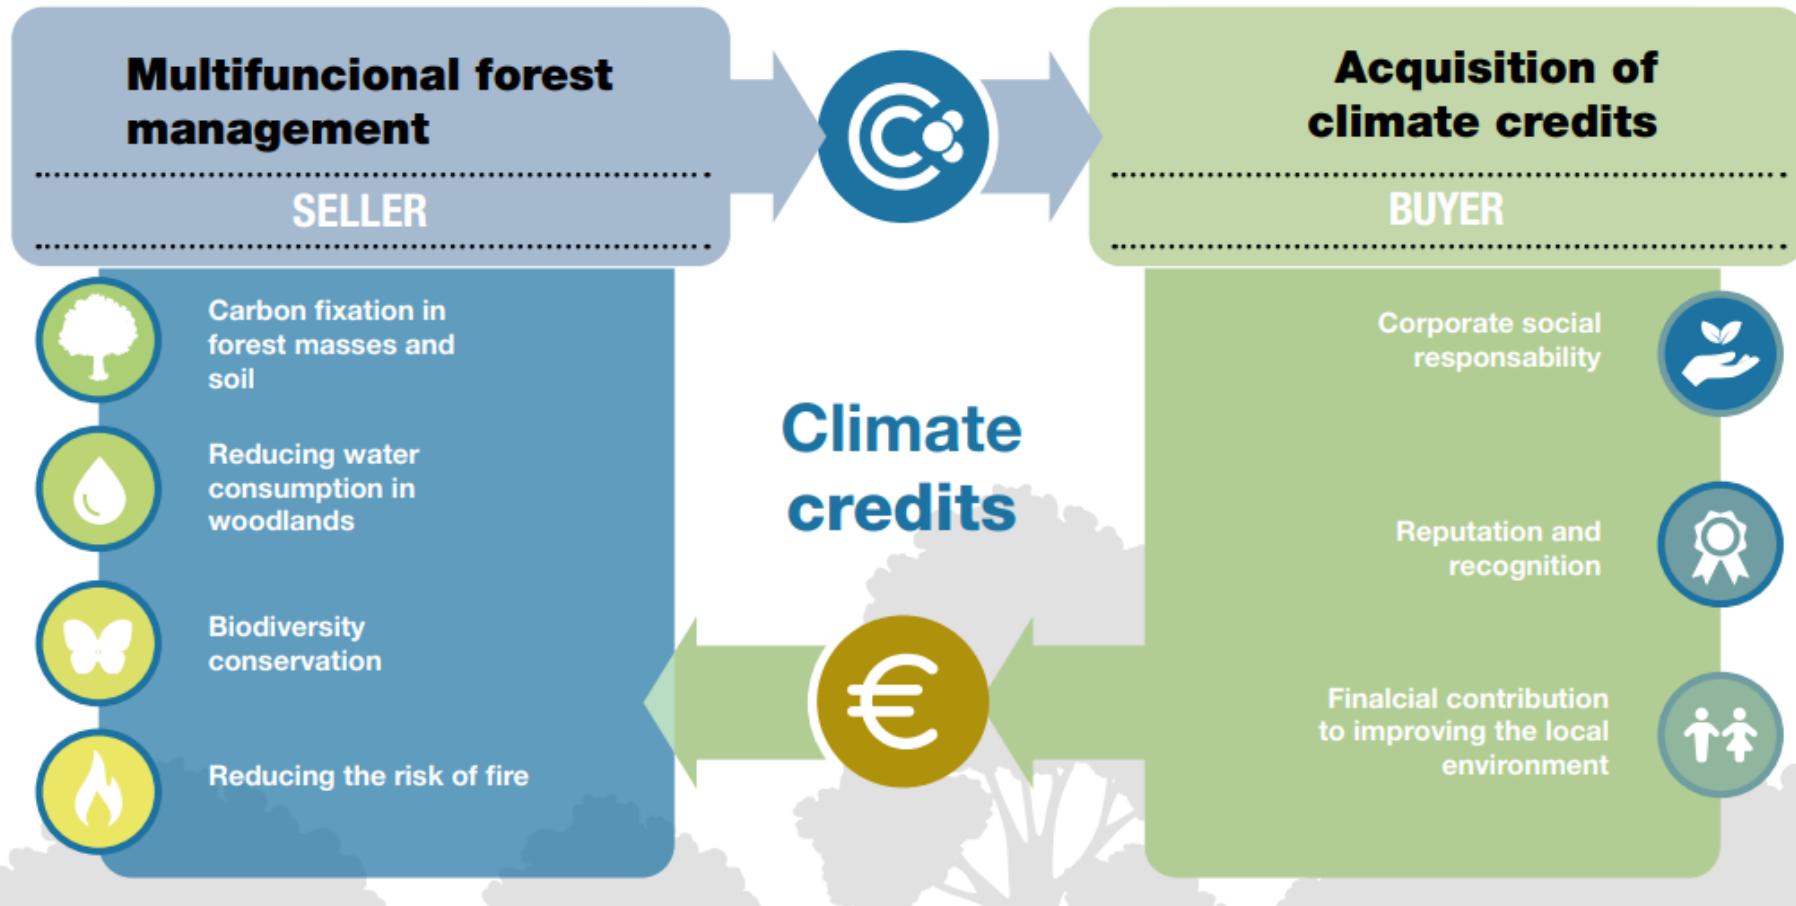

## Multifunctional forest management, beyond carbon

“ We defend the role of forest management in achieving landscapes that are more resilient to climate change. ”

# Forest Climate Credits System of Catalonia

## CARBON

Forestry fixation in forest stands and soil

## WATER

Reducing water consumption in woodlands

## BIODIVERSITY

Biodiversity conservation

**Strategic vision**

**Joint forestry management**

**Identification of the main Forest Ecosystem Services (ES) to be provided**

**Resilient landscapes**

**Forestry operational project  
PROMACC**

**(Forestry projects for mitigation and adaptation to climate change)**

# FCC System of Catalonia: principles

**Climate Smart Forestry (CSF)** “should enable both forests and society to transform, adapt to and mitigate climate induced changes”

Nabuurs G-J et al (2018)  
Kauppi P et al (2018)  
Verkerk PJ et al (2020)  
Bowditch et al (2020)

**Integrative forest Management (IFM)**, valuing at the same level the co-benefits of SFM and integrate biodiversity conservation criteria

## Mitigation

from the forests to the whole value chain (**bioeconomy**)

## Adaptation

Linked to **biodiversity** (composition, genetic, functional,...) and to **CC - induced disturbances**

## Social dimension of forestry

Involvement of stakeholders from local communities to global forest **Governance**

Provision of **Ecosystem Services** at various scales and for changing demands

**1 Climate Credit = 1 ha Resilient Landscape**

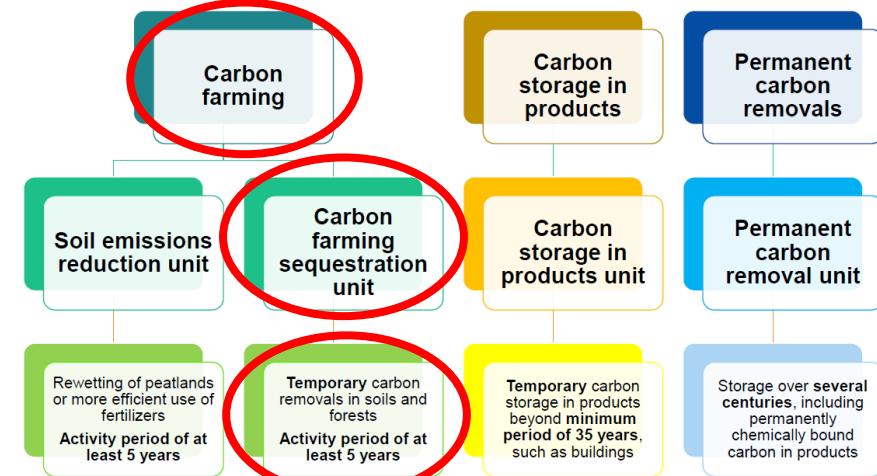

# FCC System of Catalonia: QU.A.L.ITY criteria

## Regional regulation Government Agreement 2023

## Scope of certification Article 1 and 2 CRCF Regulation

## CRITERIA FOR A ROBUST EU CERTIFICATION SYSTEM

The EU certification framework can **only be used to certify carbon removals that meet the following QU.A.L.ITY criteria:**

## Quantification

- Calculation of net benefit
- Monitoring
- Baseline

## Additionality

- Additionality tests in case of activity-specific baseline

## Liability

- Monitoring rules
- Liability mechanisms

## Sustainability

- Minimum sustainability requirements
- Monitoring and reporting of co-benefits

# QU.A.L.ITY criteria: Quantification & Sustainability

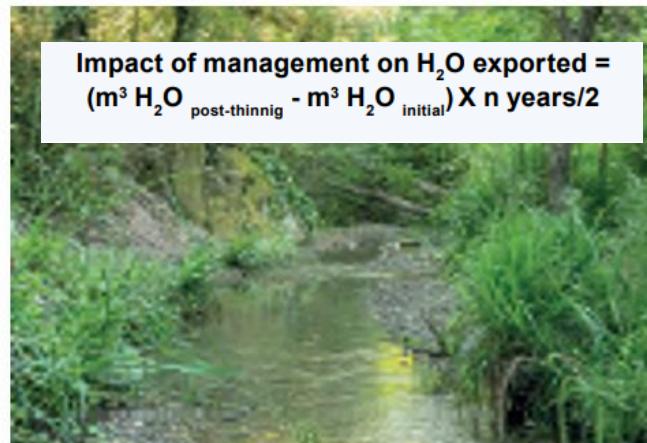

## METHODOLOGY FOR CALCULATING THE IMPACT OF FOREST MANAGEMENT ON ECOSYSTEM SERVICES: CARBON, WATER AND BIODIVERSITY

generate co-benefits

**Impact of management on CO<sub>2</sub> balance=**  
 $t\text{CO}_2 \text{ sequestered} - t\text{CO}_2 \text{ emitted} + t\text{CO}_2 \text{ avoided}$

**Impact of management on H<sub>2</sub>O exported =**  
 $(m^3 \text{H}_2\text{O}_{\text{post-thinnig}} - m^3 \text{H}_2\text{O}_{\text{initial}}) \times n \text{ years}/2$

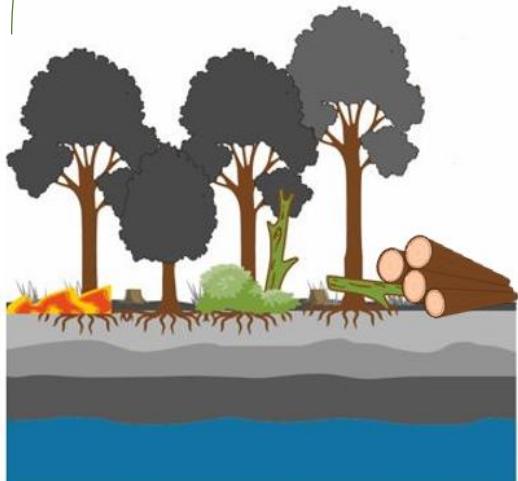

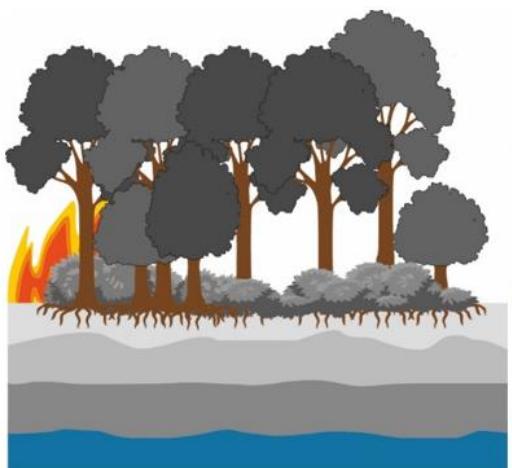

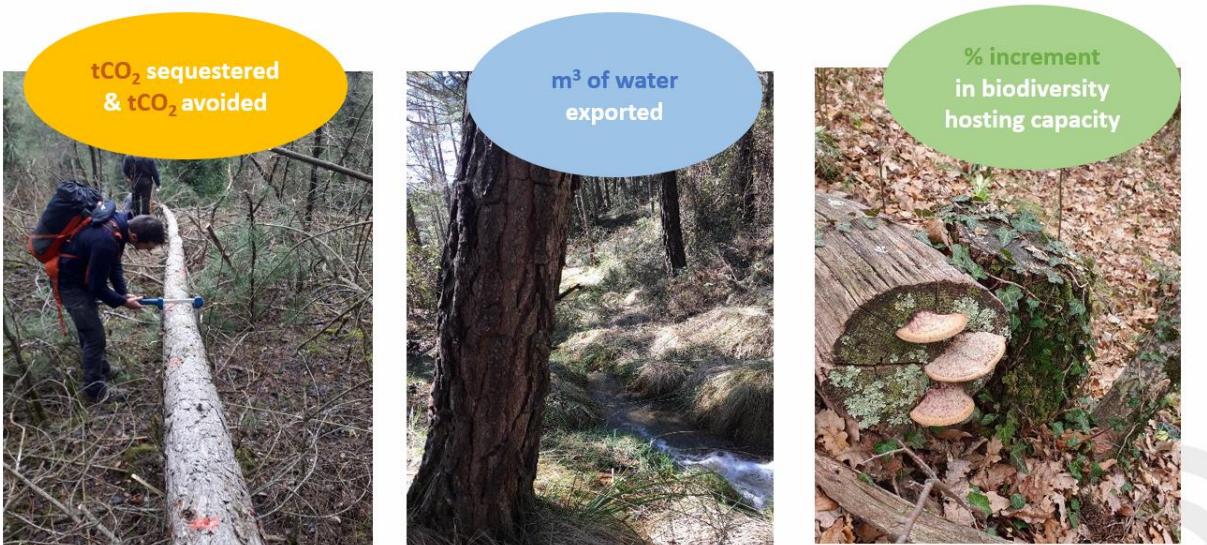

**Impact on biodiversity=**  
=Biodiversity hosting capacity<sub>managed stand</sub> -  
Biodiversity hosting capacity<sub>unmanaged stand</sub>

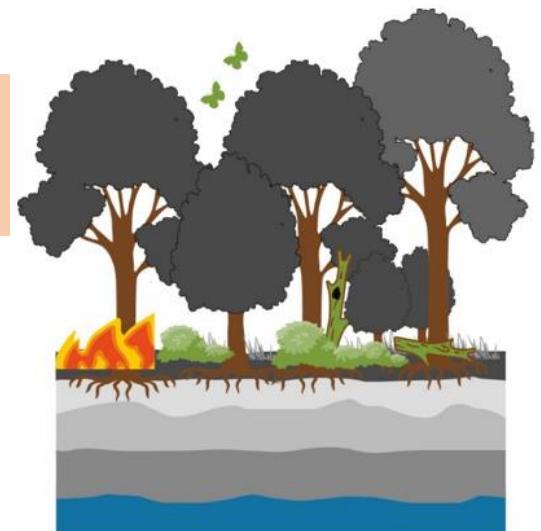

# Quantification & Liability & Addicionality & Sustainability

## SFM

We calculate the impact for the **15 years immediately after treatment**

Monitoring period

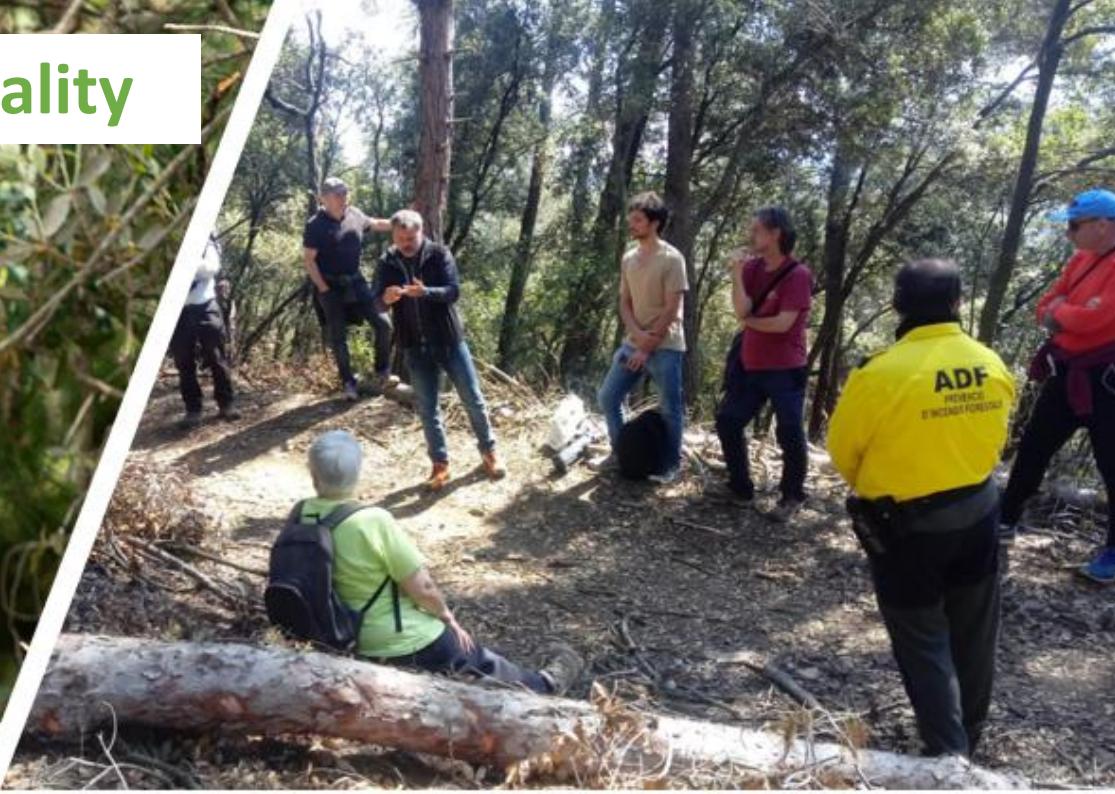

5 yrs

10 yrs

15 yrs

# QU.A.L.ITY criteria: Additionality
